

In order to solve this Cranium Calisthenics (Homework #13), you must notice some very important clues. Whether or not the logician was able to determine what A and B were tells you something very important. If there is a unique possibility and he could not determine the answer, then it must not have been the unique possibility. If he could determine the answer, then it must be that unique possibility. In other words, just because you don't know which one is correct, you must notice whether or not the logician knew.

Think well! ☺
